LearnAI Tutor – School Platform Test Guide

How to try every new feature: schools, school admin panel, phone sign-in, forgot password, teachers and sections, trial and paid plans, seats, promotion, reports, school deletion and the new Super Admin tabs. Written for the product owner. Version 5 November 2026 (round 3, the content system in section 6, and the required fixes in section 7).

Live site: https://learnaitutor.com · **Super Admin:** /super-admin · **School Portal:** /login?role=school · **School Admin panel:** /school-admin
Nothing old changed: existing students, parents and teachers keep their email sign-in and everything they had. Every individual student still has the full curriculum.

1. What was built, in one page

Who	What they can do now	Where
Super Admin (you)	Create schools (code, trial, seats, first admin), change a school's plan (trial / paid / expired), seat limit, demo access, suspend a school, add or reset school admins, see all accounts by school, delete a student account, mark a student Paid/Free, read platform analytics (DAU, drop-offs, free vs paid, most failed questions, misconceptions), set the free-lesson rules.	/super-admin → tabs Schools Analytics Users Leaderboard
School Admin (new role)	Own school only: overview (plan, seats, counts), classes & optional sections (6-A, 6-B …), teachers (add, edit name/phone/email, give them whole classes and/or sections, reset password, suspend, remove), students (add one, bulk import, edit incl. phone, reset password, suspend, remove), reports (Excel/CSV and print-to-PDF), one-click annual promotion, school details.	/login?role=school → /school-admin
Teacher (school)	Same teacher pages as before, limited to their school and sections; Free/Paid badge per student; "Add students" tab; homework per section; on an expired plan, homework from the free lessons only.	/teacher-dashboard
Teacher (individual)	Unchanged: individual students in their classes.	/teacher-dashboard
Student	Sign up with a mobile number (no code is sent) and optionally a school code; school students see their school's leaderboard; free/trial students see the free lessons and a clear "Paid plan" label on the rest.	/login?role=student&mode=signup
Parent	Unchanged; can also be linked by phone number now.	/parent-dashboard

Two things to know before testing
1. Today every class has *one* published chapter (Sets). The default free rule is "the first chapter", so trial students currently see every lesson. To see the lock in action, set *Free lessons in each free chapter* to 1 or 2 in Super Admin → Schools → Access settings (scenario 6). Set it back to 0 afterwards if you want trial schools to see the whole first chapter.
2. There is no online payment. "Paid" means you marked it: a school's plan is set by you in the Schools tab, and an individual student's Paid tick is in the Users tab.

2. Accounts you will create while testing

Account	How it is made	Signs in with
School admin	By you, when you create the school (or later with "Add admin")	Mobile number + password at /login?role=school
Teacher of a school	By the school admin, Teachers tab	Mobile number + password at /login?role=teacher
Student of a school	By the school admin or teacher (add / import), or self sign-up with the school code	Mobile number + password at /login?role=student
Individual student / parent / teacher	Self sign-up (mobile number required, email optional)	Mobile number or email + password

Use made-up mobile numbers for tests (for example 0300 0000101, 0300 0000102 ...). A number can be used once on the platform. Passwords are at least 6 characters. Generated passwords look like `Tiger4821` and are shown only once, so write them down.

3. Test scenarios

Tick each box as you go. "You should see" tells you the expected result.

Scenario 1 – Create a school Super Admin

Goal: a new school with its code, a 14-day trial, a seat limit and its first admin.

1. Sign in at /login with your super admin email and open **Schools**.
2. Click **New school**. Enter the name (e.g. *Eagle Public School*), city, seat limit **5**, keep "14-day free trial".
3. Fill the first admin: name, mobile number, password. Click **Create school**.

> **You should see:** a green message "... created with code EAGLE-1" (the code comes from the name), a blue box with the admin's phone and password, and the school in the list with *Trial · 14 days left* and seats *0 / 5*. Creating a second school with the same admin phone is refused: "This phone number already has an account".

Scenario 2 – School admin signs in and sets up classes School Admin

Goal: the school admin reaches only their own school and creates sections.

1. Open /login?role=school (or the "School admin sign in" button on the home page). Enter the admin's mobile number and password.
2. On the panel, open **Classes & Sections**. Create **Class 6 / A** and **Class 7 / A**.
3. Try to create Class 6 / A again.

> **You should see:** the panel header shows the school name and code with *Trial · N days left*; the Overview shows the trial end date and "0 of 5 seats"; sections *6-A* and *7-A* appear with 0 students; the duplicate is refused with "Section 6-A already exists".

Scenario 3 – Add a teacher and students School Admin

Goal: accounts created by the school, with passwords shown once.

1. **Teachers** tab → Add teacher: name, mobile, leave password blank, tick the whole class *Class 6* or just the section *6-A* (sections are optional; nothing ticked = whole school). Add.
2. Click the pencil on the teacher: change the name, mobile number or email, or the classes/sections. Save. The teacher now signs in with the new number.
3. **Students** tab → Add student: name, mobile, Class 6, section 6-A. Add.
4. Students → **Bulk import**. Paste three lines, one per student: `Name, Phone, Class, Section` for example:
   `Ali Ahmed, 03000000111, 6, A`
   `Sara Malik, 03000000112, 7, A, Sara2026`
   `Bad Row, 0300, 6, A`
   Click **Check rows**, then **Create 2 accounts**.
5. Click **Download logins**.

> **You should see:** each new account's phone and generated password in a blue box; the check marks the third row "Phone number is not valid"; the import creates 2 and fails 1; a CSV with the logins downloads; the Students list shows every student with class-section (or just the class when the school uses no sections), *Free* badge, "Not yet" for the diagnostic and *Active*. The teacher row shows "Class 6 (all)" or "6-A". The Overview seat bar now says 3 of 5.

Scenario 4 – A student joins with the school code Student

Goal: self sign-up by phone, linked to the school by code; the seat limit holds.

1. Open /login?role=student&mode=signup (the home page "Get Started" also lands here).
2. Enter name, mobile, password, Class 6, school code *EAGLE-1* (lowercase works too) and a parent's phone. Create Account.
3. Repeat with two more students to reach the seat limit of 5, then try a sixth.
4. Try a wrong code, e.g. *NOPE-9*.

> **You should see:** the student lands on the diagnostic test; the school admin's Students tab lists them in Class 6 (no section yet, the admin can set one); the sixth sign-up is refused with "The school has used all 5 of its seats"; the wrong code says "That school code was not found".

Scenario 5 – Phone sign-in and password reset All roles

1. Sign out. Sign in as the student with the mobile number (any of these forms work: 03000000111, 0300-0000111, +92 300 0000111) and the password.
2. Sign in with a wrong password.
3. As school admin, Students → key icon *Reset password* on a student; sign in with the new password.
4. Sign in with an old *email* account you already had (a demo student or teacher).

> **You should see:** all phone forms sign in; a wrong password says "The phone/email or the password is wrong"; the new password works and the old one does not; email accounts sign in exactly as before.

Scenario 6 – What a trial student can open Student

1. In Super Admin → Schools → **Access settings**, set *Free lessons in each free chapter* to **1** and save.
2. Sign in as a student of the trial school and finish the diagnostic (or open the dashboard if already done).
3. Look at "Your 5 active topics" and the Learn page; open the first lesson; then try the second lesson or its quiz.

> **You should see:** a grey "Free lessons" notice on the dashboard explaining the trial; the first lesson opens; later lessons show *Paid plan* and opening one says "Your school's trial includes the first lesson of the first chapter. Ask your school to upgrade…". The teacher and school admin panels show the student as *Free*.

Scenario 7 – Paid plan, demo trial and individually paid students Super Admin

1. Schools → **Manage** the school → Plan *Paid* → Save. Reload the student's dashboard.
2. Set the plan back to *Trial*, tick *Demo trial: open the whole curriculum during the trial* → Save. Reload the student.
3. Untick demo. Then in **Users**, filter by the school, tick *Paid* for one student only. Reload that student.
4. Set *Free lessons in each free chapter* back to 0 when you are done.

> **You should see:** paid plan → the notice disappears and every lesson opens; demo trial → the same; after unticking demo, only the individually paid student has everything (badge *Paid*), the others are *Free* again.

Scenario 8 – Teacher of a school Teacher

1. Sign in at /login?role=teacher with the teacher's mobile and password.
2. Look at the dashboard header, the student list and the class filter.
3. Open **Add students** and add one to 6-A. Try to reset a 7-A student's password (there is none in the list – that is the point).
4. Open **Homework**: pick Class 6, a lesson, "Whole class" and the section *6-A only*. Assign.
5. Sign in as a 6-A student and as a Class 6 student without a section.

> **You should see:** the header shows the school name and plan badge; a teacher with only *6-A* ticked sees 6-A students only and must pick a section for whole-class homework; a teacher with the whole *Class 6* ticked sees every Class 6 student (with or without a section) and can assign to the whole class without choosing a section; the homework reaches exactly those students. Nothing ticked = the whole school.

Scenario 9 – Expired trial Super Admin Teacher

1. Schools → Manage → Plan *Expired / free* → Save (or set the trial end date to yesterday).
2. Sign in as the school admin and as the teacher. Open Homework as the teacher with *Free lessons in each free chapter* = 1.

> **You should see:** the panels still work fully; the school admin overview says "Trial ended"; the teacher's Homework tab shows an amber notice and locked lessons with a lock icon that cannot be ticked; assigning a free lesson still works; students keep the free lessons only.

Scenario 10 – Suspend a school, suspend a person Super Admin School Admin

1. Schools → Manage → Status *Suspended* → Save. Try the school admin, teacher and student sign-ins.
2. Set the status back to *Active*.
3. As school admin, Students → suspend one student; try to sign in as that student; unsuspend.

> **You should see:** every member of a suspended school is refused with "Your school's account is suspended"; a suspended person sees "This account is deactivated"; after unsuspending, sign-in works again.

Scenario 11 – Remove and delete School Admin Super Admin

1. As school admin, Students → *Remove from school* on a student. Check the Overview seats. Sign in as that student.
2. Teachers → *Remove from school* on the teacher. Try the teacher sign-in.
3. As super admin, Users → filter by the school → trash icon on a student → type DELETE.

> **You should see:** the removed student keeps the account and progress as an individual student and a seat is freed; the removed teacher's account is deleted, so the number can be added again (use *Suspend* for a temporary block); the deleted student disappears from Users and cannot sign in; the seat is freed.

Scenario 12 – Annual promotion School Admin

1. Have students in 6-A, 7-A and 8-A. Open **Promotion** and read the preview table.
2. Type the school code to confirm and click **Promote all classes**.
3. Open Students; switch the filter to *Graduated*. Try Promotion again.

> **You should see:** the preview lists 6-A → 7-A, 7-A → 8-A, 8-A → Graduated and any sections that will be created; after running, students moved up with their section names kept, Class 8 students are listed under Graduated with all their history, seats count current students only, promoted students are asked to take the new class's diagnostic (if the box was ticked), and a second run within six months needs the "I understand" tick.

Scenario 13 – Reports School Admin Teacher

1. School admin → **Reports**. Click *Sections (Excel)*, *Students (Excel)* and *Print / Save as PDF*.
2. Students tab → *Export CSV*.

> **You should see:** a table per section (students, diagnostic done, quizzes, lessons, average XP, active last 7 days, paid/free) and a table of every student; the CSV files open in Excel; the print view has the school name and date and saves as PDF from the browser's print dialog.

Scenario 14 – Two schools never see each other Isolation

1. Create a second school (Scenario 1) with its own admin, teacher and students.
2. Sign in as school B's admin: look at Students, Teachers, Reports. Open `/school-admin?schoolId=<school A id>` (copy the id from the Open panel link in Super Admin).
3. Sign in as a student of school A and open Leaderboard; then as a student of school B.

> **You should see:** school B's admin sees only school B; the school A link answers "You can only manage your own school"; each student sees a board with their own school's name and only its students; individual students keep the public board. Homework from school A never reaches school B.

Scenario 15 – Super Admin analytics and users Super Admin

1. Open **Analytics** after a day or two of real use.
2. Open **Users**: search by phone, filter by school and by role, reset a password, revoke sessions.
3. Open **Leaderboard**: choose a school in the first drop-down.

> **You should see:** Active today (DAU), active 7/30 days, regular students (3+ days), signed-up vs diagnostic completed vs drop-offs vs one-lesson completers, paid vs free, school vs individual, a bar per day, most failed questions with their wrong rate, top misconceptions with the lessons they appear in, and a schools table. Users shows School, Class, Plan columns and the new actions. The leaderboard shows the chosen school's board and its reward decision.

Scenario 16 – Forgot password All roles

1. On the sign-in page click **Forgot password?**, enter the phone number or email of an account that has an email, and click *Send reset link*.
2. Open the email, choose a new password on the page it opens, then sign in again.
3. Try it with a phone-only account (no email given at sign-up or by the admin).

> **You should see:** "A reset link was sent to a***@..."; the link sets a new password and the old one stops working; a phone-only account is told it has no email and that the school admin (school accounts) or LearnAI Tutor support (individual accounts) must set a new password. Admins can add an email to a student or teacher later (edit), which switches "Forgot password" on for them. Accounts that already existed with an email work straight away.

Scenario 17 – Suspended students disappear from the school's view

School Admin Teacher

1. Students → suspend a student. Look at the Students list, the Reports tab and the teacher's pages.
2. Switch the Students list filter to *Suspended*.
3. Click *Reactivate*.

> **You should see:** the suspended student is gone from every list and report, cannot sign in, and cannot be edited; the Suspended filter shows only their name and class with Reactivate and Remove; after reactivating they are back with full details.

Scenario 18 – Delete a school Super Admin

1. Schools → Manage → scroll to **Delete this school**. Choose *Keep the students* or *Delete the students too*.
2. Type the school code and click *Delete school*; confirm the browser question.
3. Sign in as one of its former students (if kept) and as its former admin.

> **You should see:** the school leaves the list; its code can be issued again; teacher and admin accounts are gone (their numbers can be used again); kept students sign in as individual learners with all their progress, deleted students cannot sign in; its homework and leaderboards are gone. The wrong code is refused.

4. Messages you may see and what they mean

Message	Meaning
This phone number already has an account. Sign in instead, or use another number.	Each mobile number can be used once on the platform.
The school has used all N of its seats. Ask the platform admin to add seats.	Seat limit reached; raise it in Super Admin → Schools → Manage.
That school code was not found.	Typo in the code, or the school does not exist.
You can only manage your own school / That record belongs to another school	Cross-school attempt refused (HTTP 403).
Your school's account is suspended.	The school is suspended by the super admin.
This account is deactivated.	The person is suspended.
This account has no email address, so a reset link cannot be sent.	Phone-only account; an admin sets a new password, or adds an email first.
This email already belongs to another account.	An email can be the sign-in email of one account only.

This student is suspended. Reactivate the account before changing it.	Suspended students are hidden and frozen until reactivated.
Your school's trial includes … / plan has ended …	The lesson is outside the free lessons; a paid plan or an individual Paid tick opens it.
Choose a section for whole-class homework	A teacher who looks after sections only (not the whole class) must pick one of them.
Signed in as a different account	Another sign-in in the same browser (another tab) replaced the school admin's session; sign in again as the school admin.
Type the school code … to confirm	Promotion needs the exact code typed in.
This school was promoted on … tick "I understand"	Promotion ran less than six months ago.

5. Limits and decisions to know

- **Classes 6, 7 and 8** only, because the curriculum and diagnostics exist for those. Promotion graduates Class 8. Adding Class 9 later needs content first.
- **Free rule:** first chapter(s) of each class, optionally only the first N lessons of each. With one chapter per class live today, use the lesson limit to restrict trials.
- **Individual (old) students** stay on the full curriculum unless you untick Paid for them in Users. Unticking also removes them from weekly rewards, as before.
- **Password reset:** any account with an email can use "Forgot password" (Firebase emails the link). Phone-only accounts are reset by the school admin, teacher (own classes/sections) or super admin, or get an email added first.
- **Removing** a teacher or school admin deletes that account (nothing of theirs is kept except the audit trail), so the phone number can be used again; removing a student only takes them out of the school.
- **One sign-in per browser:** signing in as a student or teacher in another tab signs the school admin out of this browser; the panel then shows a clear "Signed in as a different account" notice instead of failing. Use a second browser or a private window to test two roles at once.
- **Individual teachers** who signed up themselves and have no classes ticked still see every individual student (unchanged from before). Tick their classes in Users to limit them.
- **School leaderboards** close every Monday like the public board; rewards per school are approved in Super Admin → Leaderboard with the school selected.
- **Trial length, free lessons and default seats** are in Super Admin → Schools → Access settings.

6. Content system: levels and textbook order (2 November 2026)

Two rules from the Content System Requirements document now apply everywhere.

- **Only micro-topic questions teach.** A micro-topic question keeps its hint, step-by-step solution and the reason for every wrong option. A sub-topic or main-topic question only marks

right or wrong: the student sees no Hint button, and a wrong answer shows just "Not quite" with the correct answer, without the common-mistake cards or a remedial lesson.

- **The textbook decides the order.** Chapters, sub-topics and lessons are shown in the Oxford Countdown / Sindh Textbook Board order on every screen (student path, Learn page, Super Admin Curriculum tab), never in the order they were generated. When an AI draft creates a new micro-topic, it is placed where the textbook teaches it; if the place could not be confirmed, it goes to the end of its chapter with an "Order unconfirmed" badge.

#	What to do	What you should see
19	Super Admin → AI Studio: generate a **Sub-topic** or **Main topic** pool and open its review.	The first card is "Pool boundary" (title, covered skills, out of scope) with no explanation or local example. Question cards show no hint, solution or reasons, and the "Show hints, solutions and reasons" box is replaced by a note. Approving works with those fields empty.
20	Super Admin → AI Studio: generate a **Micro-topic** pool.	Unchanged: explanation, local example, hints, solutions and wrong-option reasons are all written and checked, exactly as before.
21	As a student, take a quiz that contains a sub-topic or main-topic question (Questions tab shows the pool level of each question).	On that question there is no Hint button. A wrong answer shows "Not quite" with your answer and the correct answer, then the next question; no mistake cards, no remedial lesson. A micro-topic question still behaves as before.
22	Super Admin → Questions: edit a question and change "Pool level".	Sub-topic or Main topic hides the hint, explanation and "why wrong" sections and saves with them empty. Micro-topic requires a hint and explanation again.
23	Super Admin → Curriculum: look at "Curriculum order", choose a class and press **Order by textbook (AI)**.	A side-by-side preview: the current order and the textbook order, with moved lessons marked and a note from the model. Nothing changes until you press "Apply this order". After applying, the lesson cards below, the student path and the Learn page all follow that order.
24	Super Admin → AI Studio: create a **new micro-topic** in an existing chapter (e.g. a lesson that belongs in the middle of Sets) and approve it.	The approval message says where it was placed. The Curriculum tab shows the lesson at its textbook position, not at the end; the lessons after it moved down one place. If the model could not decide, the lesson is last in the chapter and carries an "Order unconfirmed" badge, which "Order by textbook (AI)" clears.
25	Super Admin → Curriculum: edit a lesson and set "Sub-topic order in chapter".	Lessons with a sub-topic order come first, in that order; lessons without one come after them. Within a sub-topic, "Order in topic" decides; equal values fall back to creation time, so the order is always the same.

7. Required fixes (5 November 2026)

#	What to do	What you should see
26	Create a student account with only an email (leave Mobile Number empty). Then try once with both empty.	Email only works and you can sign in with that email. Both empty shows "Enter a mobile number or an email address". A mobile number alone still works as before. School admins can also add a student with only an email (Students tab or bulk import, email typed in the Phone column).
27	School admin → Promotion: press "Promote all classes" before typing the school code, then type it and press again.	Without the code a yellow note says what is missing (the button never just stays grey). With the code a confirmation appears on the page itself: "Yes, promote now". After it, "Promotion complete" with the numbers. No browser pop-up is used any more, so phones and browsers that block pop-ups work too.
28	Super Admin → Schools → open a test school → Delete this school: press Delete before and after typing the code.	Same pattern: a note when the code is missing, then a red confirmation on the page, "Yes, delete for good". The school disappears from the list.
29	As a student, open a lesson, go to "Try it", answer it, then close the tab and open the same lesson again.	"Welcome back! You continue from where you left off." The lesson opens at its questions, past the explanation, big idea and example; a question already answered right is not asked again. "Read the lesson from the start" is there if wanted.
30	Start the quiz of a lesson, answer two questions, leave, then open the same lesson again from the dashboard.	It goes straight to the quiz at question 3. Answered questions are not repeated. A "Lesson" button in the quiz header opens the lesson for reading without losing the quiz.
31	Leaderboard: as a student, finish two quizzes on two different lessons on the same day.	Only the first quiz of the day gives the +10 points for taking part; correct answers still earn their points. The board shows "Most improved this week" (biggest rise over last week, for students who played both weeks).
32	Student leaderboard: press Class 6, Class 7 and Class 8. School admin: open the new Leaderboard tab.	Each class has its own board. A student earns points only on their own class board and sees a note when looking at another class. The school admin sees the school's own board per class, with this week's standings, most improved and last week's top 3.
33	In a quiz, turn off the internet (airplane mode), answer two questions, then turn it back on.	"You are offline" appears and the quiz continues; answers are kept on the device. When the internet returns, they sync by themselves (retried every 20 seconds as well) and the quiz continues at the right question. No answer is lost or asked twice. The quiz stops at its own number of questions even offline.
34	Login → Forgot password → send a reset link to an account with an email.	The green "link sent" message disappears by itself after about 8 seconds, and "Send reset link" can be pressed again for another link.

Everything in this guide was verified on production with automated checks (83 on 22 October 2026, plus the teacher-scope and edit checks on 30 October 2026) and a browser walk-through; all test schools and accounts were deleted

afterwards. The content-system checks of 2 November 2026 ran on production with a throwaway student that was deleted afterwards.
